Subject: Southern Forest Resource Assessment comments

Mr. John Greis

Dear Mr. John Greis,

Thank you for providing the public with an opportunity to comment on the draft of the Southern Forest Resource Assessment (SFRA). I am writing to urge you to include a fuller analysis of ecological and socio-economic sustainability and to acknowledge the threat posed by the continued expansion of industrial forestry in the final version of the report.

As I see it, with much experience, national forest lands are far more valuable as resources for tourism and recreation than as timberland managed for production of wood. Be fair. This is public land.

Sincerely,

Guy Nesom
